

1-3-2-6 Gambling System and <https://www.bursa303.center/>

Positive progression system, similar to the Paroli System.

This Betting System is very similar to the Paroli System, it is a positive progression system that is based on the premise that you can win four times in a row. A positive progression system is one where you increase the bet when you win, it requires less money and takes advantage of winning streaks.

Your initial bet is 1 unit, the second 3 units, the third 2 units and the fourth 6 units. Let's assume that each unit is \$10 and the odds are 1:1 - even money.

The first bet you place is \$10. When winning (at 1:1) \$10 is added to the \$20 on the table making the second bet \$30. If you win again on the second bet, there will be \$60 on the table, of this you take down \$40 and the third bet is now \$20. If the third bet wins, you will have \$40 on the table to which you add \$20 making a total of \$60 for the fourth bet.

Following the 1-3-2-6 betting system, your profit at the end of four successful bets is ten units. But besides offering substantial reward, the system is also risk averse. If you lose your first bet, you lose one unit. If you win your first bet and lose the second you lose two units, but if you win the second and lose the third, you are still up 2 units. Lose the fourth bet and you break even, but win that bet and you are up 10 units!

If the fourth bet wins, there would be a total of \$120 on the table, all of which is net profit. Now all the bet is taken down and you start the system all over again at \$10. Also, each time you lose, at any level, you start all over again at \$10.

If you lose the first bet, your loss is \$10. The second level loss is \$20 (because you added another \$10). At the third level, a loss will give you a net profit of \$20 (because you have taken down \$40). At the fourth level, a loss leaves you breaking even (because you put back \$20 out of the \$40 taken down). The ultimate attraction of this system is that you have a chance of making \$120 net profit at the risk of losing \$20. This essentially means that you can lose six times at the worst <https://www.bursa303.center/> (second bet) and with one win (a set of four wins in a row) get your money back.

To Summarise:

- Bet one unit.
- If you win, add another, making a total of three units.
- If you win again, remove four units from the table, leaving two units in play.
- If the third bet wins, add two units for a total of six on the table.
- If your fourth bet wins, collect the 12 units on the table and start again.
