

4 Awesome WORDPRESS HEADER AND FOOTER **Plugins**

Header and Footer is one of the key elements of website, however, it is often overlooked. Users often get their first impression of a particular site from what the header looks like. A distorted Header can destroy the impression of any website and you must give a lot of importance to the Header and Footer section because if it is used properly, then header and footer section can create a lot of value for your site.

As an experienced [**Wordpress website design Los Angeles**](#) expert, we suggest to take care of what the Header and the Footer gives access to, when designing the structure of a website.

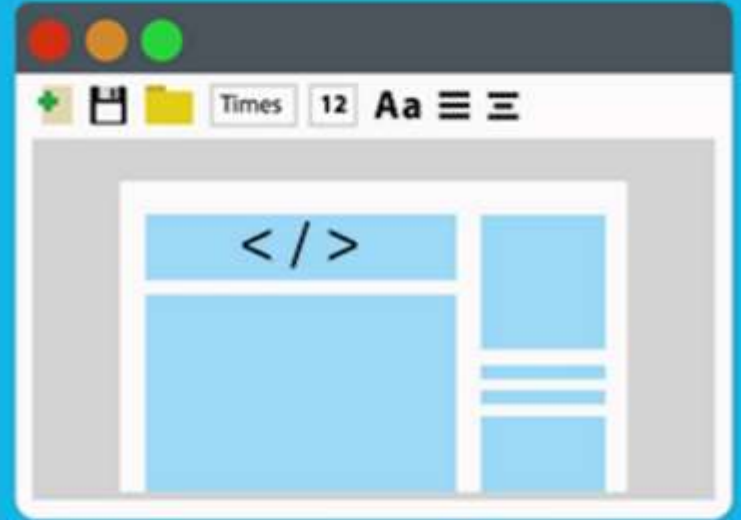

In this video, we will share some of the best 4 WordPress Header and Footer plugins which will help you to create a great looking fully optimized Header and Footer section for your WordPress Site. These plugins are easy to setup and use, so everyone from WordPress beginners to more advanced users can benefit from them.

1. Insert Headers and Footers

This plugin is a simple plugin that helps you to insert code directly into a header or footer. this plugin is compatible with most themes and available for free with good support options as well.

The Insert Headers and Footers plugin let users to insert any codes or scripts, including JavaScript and HTML. The plugin is ideal for WordPress beginners.

2. Simple Header Footer HTML

This plugin is useful but it has some complex application. If you want to enable your users to insert custom CSS or add custom headers or some JavaScript into the site without having to edit any theme files. Unlike similar header/footer plugins, this plugin by design does not allow to insert PHP code and does not contain any evil `eval()` calls.

3. Header And Footer Scripts

The Header and Footer Scripts plugin is a good option for anyone, who wants to add custom codes, fonts or styles to their WordPress site. This plugin integrates easily with WooCommerce, and is available for free from WordPress.

Header and Footer Scripts plugin lets users inject CSS codes, HTML tags, and JavaScript into the header or footer directly. There are only a few options and settings, to ensure the simplicity of using the plugin.

4. WP Custom Header Footer

Isn't it amazing if you don't have to actually edit your theme file to add custom JS or CSS files? WP Custom Header Footer allows you to do so.

You just have to go to the header footer option page and make the changes.

The header and footer contain the important information that you want to visit, links or a call to action. So it is necessary to use them to their full potential. Tweaking them is necessary because then you can add a lot more information than you could've if used conventionally.
